DETAILED ACTION

Election/Restrictions

1. Claims 7-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected article, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/15/04.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 6 lacks clear antecedent basis for "the perpendicular magnetic film." For purposes of examination, it has been assumed that this layer refers to the "perpendicular magnetic layer" set forth in claim 1.

Claim 6 is indefinite because it is not clear how it is possible to deposit the CoCr series perpendicular recording layer after forming the "perpendicular magnetic film" (i.e. layer) and before forming the underlayer. According to claim 3, from which 6 depends, the underlayer must be deposited before forming "the perpendicular magnetic layer" (i.e., film), thus, anything

Art Unit: 1773

deposited after the perpendicular magnetic layer would necessarily have to be deposited after the underlayer.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Lairson et al. (US 5834085).

Lairson et al. disclose a method of making a perpendicular magnetic recording medium having multiple layers deposited at a temperature of up to 300 °C on a substrate wherein the magnetic layers are formed from Co and additive elements such as Cr and Ta wherein the additive elements form grain boundaries segregating Co magnetic grains (see Fig 3; col. 3, lines 44-46; col4, lines 47-67; col. 5, line 1 to 50).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lairson et al., as applied above, in view of Chen (US 6524730).

Lairson et al. fail to teach the soft magnetic layer as required by claim 5.

Chen teaches that it is known in the art to deposit a soft magnetic layer on a substrate in a perpendicular magnetic recording medium in order to provide a path for magnetic flux emanating from a magnetic head (col. 3, lines 15-20).

It would have been obvious to one of ordinary skill in the art at the time of invention to add a soft magnetic underlayer on the substrate taught by Lairson et al. in order to improve writing efficiency by providing a flux return path for the magnetic head.
